DETAILED ACTION

1. Applicant is advised that the Notice of Allowance mailed is vacated. If the issue fee has already been paid, applicant may request a refund or request that the fee be credited to a deposit account. However, applicant may wait until the application is either found allowable or held abandoned. If allowed, upon receipt of a new Notice of Allowance, applicant may request that the previously submitted issue fee be applied. If abandoned, applicant may request refund or credit to a specified Deposit Account.
2. The indicated allowability of claims 4-6 is withdrawn in view of the newly discovered reference(s) to Lin (U.S. Patent No. 5,828,380). Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 4 and 6 are rejected under 35 U.S.C. 102(e) as being anticipated by Lin (U.S. Patent No. 5,828,380).

As per independent claim 4, Lin teaches a method and system for processing image comprising a step of determining a directional relation corresponding to the pixels, wherein the directional relation defines relations between the pixels and edges of

Art Unit: 2671

the 2D graphic object (Fig.4B; col.4, lines 23-32), a step of generating z-axis parameters corresponding to the pixels in response to the directional relation with an effect function (col.4, lines 40-57, i.e., the Applicant admitted that the measurements of the length *d* taught by Lin (U.S. Patent No. 5,828,380) is the z-axis parameters at page 2, lines 16-20 of the instant application), the effect function renders the z-axis parameters responsive to a mapping table defining offset value of the z-axis parameters (col.4, line 58 through col.5, line 12), and a step of rendering the 3D graphic object in response to the 2D graphic object and the z-axis parameters (Figs.11A-11C; col.6, lines 32-52).

As per dependent claim 6, Lin further teaches wherein each of directional relation defines relative edge positions of the 2D graphic object closest to the pixels (col.4, lines 41-42).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lin (U.S. Patent No. 5,828,380).

As per dependent claim 5, Lin further teaches wherein each of the pixels comprises red data, blue data and green data (col.2, lines 36-40).

It should be noticed that Lin fails to teach wherein the pixel includes an alpha channel data. However, a pixel includes a component such as alpha channel data is commonly well-known in the art at the time the invention was made. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to include an alpha channel data into the pixels as taught by Lin in order to make it more efficient since it would have allowed real-time compositing of multiple, arbitrarily images including anti-aliased pixels at edge boundaries between the foreground and background objects.

Allowable Subject Matter

7. Claims 1-3 and 7-9 are allowed.
